Annual mental health screening of children is recommended by AAP Bright Futures and will soon be required by DC Medicaid for participating EPSDT providers. Pediatricians often find it hard to build mental health screening into busy practice workflow and even more challenging to get identified patient needs addressed. We have designed our nine month Quality Improvement Learning Collaborative to help you. You can now earn MOC and CME credit by improving how your practice screens for and addresses children's mental health concerns.

Children's National Health Network is an approved MOC Portfolio Sponsor by the American Board of Pediatrics.

Provider participation includes:

- Nine month project participation- includes practice readiness planning to prepare practices for successful implementation (three months)
- Web-based childhood mental health "learning sessions" (CME accredited)
- Practice-based improvement pilots
- Quick monthly chart audits and data reports
- Monthly project conference calls where colleagues share solutions and best practices

Space is Limited!

Our Quality Improvement team provides:

- Free mental health screening resources (ASQ:SE starter kit & AAP Mental Health Toolkit) for each participating DC practice
- On-site support from mental health practice coaches (for DC practices)
- Access to mental health experts
- Pediatric mental health resources, including an easy-to-use resource guide
- Hands-on practice support from QI coaches
- Provider and practice performance feedback
- ABP MOC QI project approval
- Up to 30 hours CME credit for participation
